Chatbot inquiries

JSON format for my chatbot with POST requests (possible user input) and appropriate answers:

```json
{
   "greetings": {
   "hello": "Hi!",
           "hi": "Hello!",
           "hey": "Hey there!",
           "good morning": "Good morning!",
           "good evening": "Good evening!"
},
   "inquiries": {
   "how are you?": "I'm fine, thank you!",
           "what's your name?": "I'm your friendly chatbot.",
           "how old are you?": "I'm timeless!",
           "what can you do?": "I can chat with you and answer your
questions."
},
   "time_related": {
   "what time is it?": "{display_time}",
           "what's the date today?": "{display_date}"
},
   "farewell": {
   "bye": "Goodbye!",
           "see you": "See you later!",
           "good night": "Good night!"
},
   "unknown": {
   "default": "I'm not sure how to respond to that."
}
}
```

It has greetings, inquiries, time_related question, farewell and a default answer for any inputs which will not be presented in this JSON.

Possible conversation will be like:

User:hey
Chatbot:Hey there!
User:how are you?
Chatbot:I'm fine, thank you!
User:What time is it?

Chatbot:its 9:00am
User:what do you think about charlies new video?
Chatbot:I'm not sure how to respond to that.
User:see you
Chatbot:see you later!
User:exit

Chatbot session ended

Heres an example of a POST JSON payload 3 questions in with this chatbot:

```
{
"message": "what do you think about charlies new video?",
"history": [ "hey", "how are you?", "What time is it?" ]
}
```
